

Network Design and Management

3rd Year 1st Semester

Tutorial-05-SNMP

1. How (history) and why (goals) was SNMP initially introduced?
2. What are the key components of SNMP
3. What is MIB? And what is the method used to identify objects within the MIB uniquely from one another?
4. What is the language used to define the objects in the MIB?
5. What is the purpose and disadvantages of using community strings in SNMPv1? What is the default community string?
6. What are the main steps of sending a request in SNMPv1? Who is performing these steps?
7. What are the main steps of receiving a request in SNMPv1? Who is performing these steps?
8. Briefly explain how SNMPv1 GET Request is processed (Hint: Use a diagram).
9. What are the three errors that you may receive for a GET Request/Get Response operation in SNMPv1?
10. Briefly explain how SNMPv1 GETNEXT Request is processed (Hint: Use a diagram).
11. What are the three errors that you may receive for a SET Request operation in SNMPv1?
12. What is the usage of Trap messages in SNMPv1?
13. What are the 7 types of Trap messages defined in SNMPv1?
14. Explain the limitations of SNMPv1.
15. What are the major changes/additions included in SNMPv2?
16. What are the limitations of SNMP V2?
17. What are the main features introduced in SNMPv3?
18. What are the two main parts of a SNMPv3 entity?
